ZnS/CdS core/shell nanospheres were prepared via a sacrificial template method with poly(N-vinylpyrrolidone) (PVP) as both the sacrificial template and the core-forming material. The ZnS and CdS shell have a ZnS(1-x)Cd(x) phase and a layered CdS structure, respectively. The formation of the ZnS/CdS core/shell structure was directly confirmed by the XRD results. The photocatalytic hydrogen production results show that the ZnS/CdS core/shell nanospheres show almost double efficiency in photocatalytic hydrogen production compared with pure ZnS and pure CdS nanospheres. This increase in activity can be ascribed to the fact that the ZnS/CdS core/shell nanospheres have a lower conduction band position and a higher optical band gap compared with pure ZnS and pure CdS nanospheres. The effect of the reaction temperature on the hydrogen production rate was also investigated.903 F.2d 706 UNITED STATES of America, Appellee,v. Robert Jay SMITH, Appellant. No. 89-5361. United States Court of Appeals,Eighth Circuit. Submitted Feb. 15, 1990.Decided May 9, 1990. Vernon S. Muckie, Springfield, Mo., for appellant. Eric F. Melton, St. Louis, Mo., for appellee. Before LAY, Chief Judge, ARNOLD, Circuit Judge, and HENLEY, Senior Circuit Judge. PER CURIAM. 1 Robert Smith appeals his conviction under 18 U.S.C. Sec. 242 for shooting at an automobile which resulted in the death of the driver, Melvin Scamman, of St. Clair, Missouri. Smith was charged by information. The jury found Smith guilty of first degree murder, acquitted him of second degree murder, and found the lesser included offense of voluntary manslaughter. Smith f678ea9f9e
